                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nucleic acid molecule encoding a platelet membrane glycoprotein receptor glycoprotein VI (GPVI), also called TANGO 268. The GPVI polynucleotides and polypeptides and their modulators, e.g. antisense nucleic acids, ribozymes and antibodies, are useful for preventing, treating and diagnosing disorders associated with aberrant expression or activity of GPVI. These disorders include bleeding disorders (e.g. thrombocytopaenia), blood vessel injury, thrombotic disorders (e.g. thrombotic occlusion of the coronary arteries), haemorrhagic disorders, coronary artery and cerebral artery diseases (e.g. stroke and ischaemia), immunological diseases (e.g. platelet disorder) and embryonic liver disorders. Preferably they are used to prevent acture cardiac ischaemia following angioplasty and metastatic cancers,

This invention relates to a novel purified antibody comprising a CC variable heavy (VH) complementarity determining region (CDR1), VH CDR2 (CC or VH CDR3; or variable light (VL) CDR1, VL CDR2 or VL CDR3, and CC immunospecifically binding to a TANCO 268 (also referred as glycoprotein CC VI (GPVI)) antigen. The antibodies of the invention act to decrease or CC blagen or platelet release and aggregation blocker. The antibodies of the invention are useful for modulating proliferation, migration, CC morphology, differentiation and/or function of megakaryocytes and CC platelets, including during development e.g. embryogenesis, modulating platelet and platelet-endothelium interactions in CC inflammation and/or thrombosis, and modulating platelet aggregation and CC inflammation and/or thrombosis, and modulating platelet proliferation, migration, are also useful for modulating platelet proliferation, cC migration, morphology, differentiation and/or platelet proliferation, cC migration, morphology, differentiation and/or function, e.g. bleeding CC diseases such as thrombocytopaenia. Other diseases which may be CC modulated by these antibodies are thrombotic disorders, cerebral CC vascular diseases involving leg swelling, pain and ulceration, CC pulmonary embolism, etc); coronary diseases (e.g. cardiovascular CC restenosis, atheroscese involving leg swelling, pain and ulceration, coronary cretenosis, atherosceses involving leg swelling, pain and ulceration, coronary cretenosis, atherosceses involving leg swelling cardiovascular developmental disorders, embryonic disorders, liver disorders, cerebral cardiovascular final disorders, cerebral thromboembolism diseases, venous thromboembolism disease, coronary diseases, creability causes a manual disorders. The antibodies of the invention only causes a manual cardiovascular in nlatelet counts, blatelet aggregation, and/or and/or manual or nlatelet counts. Datelet aggregation, and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel substantially purified antibody immunospecifically binding to TANGO 268 antigen, useful for treating bleeding disorders such as thrombocytopenia, stroke, ischemia, pulmonary embolism, atherosclerosis
                                                                               transient decrease in platelet counts, platelet aggregation, and/or platelet activation and so have some advantages over prior art methods. The present sequence represents a peptide sequence used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Busfield SJ, Villeval J, Qian DM, Kingsbury G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present SEQ ID NO:1027 to 1052, 7921 and 7922.

                                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid genes from Drosophila and interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2001-656860/75.

                                                                                                                                                                                                                                                             The present invention relates to a composition for treating tumours positive for disialoganglioside GD2 which is based on human antibody fragments that activate the immune system against GD2, specifically by inducing anti-GD2 antibodies. The composition can be used in the treatment of neuroblastoma and melanoma. The present sequence is an
                                                                                                                                                                                                                               Sequence

The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with heart disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is Paenibacillus pabuli xyloglucanase XYG1035 enzyme CC Cterminal sequence which belongs to the family 5 of glycosyl hydrolase. CC Xyloglucanase is useful for machine treatment of fabrics during a washing CC cycle of a machine washing process with a washing solution. Xyloglucanase is useful in textile industry for improving the properties of cellulosic CC fibres, yarn, woven or non-woven fabric and in scouring process step, in CC cellulose fibre processing industry for ratting of fibres such as hemp, CC give, flax and linen. Xyloglucanase is useful for treatment of cellulosic CC material during the processing of cellulosic material into a material CC ready for garment manufacture or fabric manufacture, e.g. in the desizing CC or garment. Xyloglucanase is also useful in detergent compositions for CC corgarment. Xyloglucanase is also useful in detergent compositions for CC especially soils and spots resulting from xyloglucan-containing food and CC plants. Xyloglucanase prevents binding of certain soils to the xyloglucan CC conventional liquid detergent compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                          The present sequence is Paenibacillus pabuli xyloglucanase XYG1037 enzyme CC C-terminal sequence which belongs to the family 5 of glycosyl hydrolase. CC Xyloglucanase is useful for machine treatment of fabrics during a washing CC cycle of a machine washing process with a washing solution Xyloglucanase is useful in textile industry for improving the properties of cellulosic fibres, yarn, woven or non-woven fabric and in scouring process step, in CC cellulose fibre processing industry for ratting of fibres such as hemp, CC jute, flax and linen. Xyloglucanase is useful for treatment of cellulosic material during the processing of cellulosic material into a material composition or during industrial or household laundering of such fabric coryanters. Xyloglucanase is also useful in detergent compositions for CC composition or bleaching certain soils or stains present on laundry, CC specially soils and spots resulting from xyloglucan-containing food and plants. Xyloglucanase prevents binding of certain soils to the xyloglucan containing food and plants. Xyloglucanase prevents binding of certain soils to the xyloglucan containing food and plants. Xyloglucanase prevents binding of certain soils to the xyloglucan containing food and plants. Xyloglucanase prevents binding of certain soils to the xyloglucan containing food and plants. Xyloglucanase prevents binding of certain soils to the xyloglucan conventional limit detergent compositions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC mature enzyme which belongs to the family 5 of glycosyl hydrolase.
CC Xyloglucanase is useful for machine treatment of fabrics during a washing CC cycle of a machine washing process with a washing solution. Xyloglucanase is useful in textile industry for improving the properties of cellulosic CC fibres, yarn, woven or non-woven fabric and in scouring process step, in CC cellulose fibre processing industry for ratting of fibres such as hemp, in CC cycle, flax and linen. Xyloglucanase is useful for treatment of cellulosic CC material during the processing of cellulosic material into a material CC ready for garment manufacture or fabric manufacture, e.g. in the desizing CC or scouring or during industrial or household laundering of such fabric CC or garment. Xyloglucanase is also useful in detergent compositions for CC removing or bleaching certain soils or stains present on laundry, CC especially soils and spots resulting from xyloglucan-containing food and plants. Xyloglucanase prevents binding of certain soils to the xyloglucan containing food and left on the cellulosic material and shows high performance in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cycle of a machine washing process with a washing solution. Xyloglucanase is useful in textile industry for improving the properties of cellulosic fibres, yarn, woven or non-woven fabric and in scouring process step, in cellulose fibre processing industry for ratting of fibres such as hemp, jute, flax and linen: Xyloglucanase is useful for treatment of cellulosic material during the processing of cellulosic material into a material ready for garment manufacture or fabric manufacture, e.g. in the desizing or scouring or during industrial or household laundering of such fabric or garment. Xyloglucanase is also useful in detergent compositions for removing or bleaching certain soils or stains present on laundry, especially soils and spots resulting from xyloglucan-containing food and plants. Xyloglucanase prevents binding of certain soils to the xyloglucan left on the cellulosic material and shows high performance in
                     capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                specification, but was obtained in electronic format directly from WIPO
at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                        New isolated nucleic a

TISSUE SPECIFICITY: In the embryo, expressed ubiquitously until the late blastula stage, in the marginal zone of gastrula stages, in the presumptive forebrain and hindbrain and in the trunk region of early somite stages. In later stages, also expressed in Rohon-Beard neurons, epiphysis, lateral line placodes, pectoral fin buds, developing lens and heart.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PTM: Phosphorylated (Probable).
